

NETWORK SECURITY AND 24 HOUR SUPPORT AND MONITORING

Eliminate wasted time and money by managing your security from one location.

Standard point-of-service security solutions are highly difficult to institute, update, and manage. This can lead to complex operations and an increase to overhead cost. Valor Technologies wants to help you eliminate these issues with an All-In-One Security Solution, also known as Unified Threat Management (UTM).

A UTM combines all the basic IT security measures in one single device. With this solution, your business' network security can be highly manageable since the application, control, and maintenance of your network's content are all managed in a centralized location. No more will you have to institute security updates to all your workstations, which not only saves you time, but boosts profitability.

UNIFIED THREAT MANAGEMENT

Your business' online environment is a prime target for countless threats that want to steal the data of businesses just like yours. Problems such as viruses, malware, and spyware consistently pose massive threats to not just your network infrastructure, but to your budget as well. Sensitive information that's stolen can crush your business under the weight of steep compliance fines, while also ruining your reputation as a trustworthy organization.

Therefore, it's necessary to take immediate action to protect your network. The only way to fight back against all the threats that are out there is to incorporate world-class security solutions. A Unified Threat Management (UTM) solution, that is designed to eliminate the majority of threats your business might face, is a must-have for any company looking to batten down the hatches.

BUSINESS CLASS FIREWALL & WEB CONTENT FILTERING

Apply filters to user groups to only allow work related content to be accessed.

To grow as a company in today's digital world, you have to provide your employees with resources that make them more efficient. The Internet is one of most important

resources your employees will require. Unfortunately, if not controlled properly, granting access to the internet can create its own inefficiencies.

With free access to the internet, employees may be prone to use it for non-work-related tasks. By the capabilities to control access to certain types of content, such as Facebook, Twitter, YouTube, and even Netflix, you ensure that your employees are staying on task throughout the day. Some employees may require access to certain sites, for promotion and marketing purposes, while others do not. With our Content Filtering solution, you can control who is given access to what by setting up specific user groups with access levels.

By creating user groups and assigning access rights to them, you control what messages filter to what group, and control what is designated as spam for those groups, and what isn't. After your initial configuration of the software, you can then move users into groups, thoroughly managing the type of content made available to them.

▲ SPAM PROTECTION - REGAIN CONTROL OVER YOUR INBOX

As a business owner, you probably spend a solid amount of time every day checking your email and responding to leads, customers, and employees. Unfortunately, one of the primary faults in email communication is the

prevalence of spam. If your organization only works with the limited spam protection, you're likely wasting both time and money that could be better spent elsewhere.

The average small and medium-sized business shouldn't have to deal with spam complications on a regular basis. Valor Technologies' comprehensive spam protection solution is designed to help your organization eliminate spam before it ever hits your inbox. By deploying a comprehensive spam protection strategy, you and your staff can get down to business without having to first sift through piles of useless messages.

▲ DIGITAL SECURITY CAMERA SYSTEMS FOR BUSINESS

We'll take the headache out of choosing the right surveillance system for your business.

Choosing from the vast amount of surveillance systems available on the market today can be overwhelming to anyone. There's different brands, sizes, and resolutions, along with a lot of options to choose from like motion and light detection.

You want to make sure that when choosing a digital surveillance option that you're not wasting money by purchasing unnecessary equipment, while at the same time, not inhibiting your ability to gain the security you

are after. As with many of your technology needs, Valor Technologies can assist you with this. We've had enough experience in the industry to properly filter through the do's and don'ts, while keeping future expansion in mind.

FULLY HOSTED SECURITY AS A SERVICE - LEVERAGE THE CLOUD TO PROTECT YOUR NETWORK

Managed and maintained software solutions.

It's hard to have both security and privacy. Usually one is compromised to work thoroughly. Furthermore, the immense amount of time and effort it takes to keep security solutions like anti-virus, firewalls, and so on, up to date is overwhelming at best-especially for small and medium-sized businesses with limited technology budgets.

With a Security as a Service offering from Valor Technologies, your business can fully leverage enterprise-level technology solutions, without the time and expenses it takes to effectively manage and maintain them yourself. By outsourcing this responsibility to trained IT professionals, you get the peace of mind that you deserve, without the pains of managing and maintaining your security solutions.

ENTERPRISE MOBILITY MANAGEMENT SOLUTIONS

Mobilize your business today.

At Valor Technologies, we understand mobility is a major pain point of your business. However, enterprise mobility is a comprehensive subject that must address more than just the management of applications on your devices. An Enterprise Mobility Management solution is geared toward helping your organization better understand, manage, and secure your mobile systems. We'll work with you to ensure that your enterprise mobility management solution keeps your devices in check.

SECURITY NETWORKING

Providing clients with today's most powerful network and physical security solutions.

For all it gives the modern business, technology gone wrong can ruin everything faster than you can say "Oh,

no!" But if you leverage your security the right way, you can protect your network, your data, your physical building, and ultimately everything you and your staff works so hard for. To understand the importance of having a dynamic, well configured security solutions, is to understand the threats your business faces. Valor Technologies is your tour de force when it comes to business security.

Just having security processes in place isn't enough. The people that are seeking to undermine your security systems understand this and will look for ways to use whatever they can to get around the efforts you put forth. Our consultants can work with you to find the security solutions your business needs, while our technicians are versed in industry's very best practices to ensure that your solutions are managed and maintained. There are three aspects to a business security strategy. First you need to have systems in place to protect your physical location, then you need to deploy systems that are designed to protect your network and data, and finally, you have to have a system in place that trains your staff on what to look for to keep your company secure.

ACCESS CONTROL - VIRTUAL AND PHYSICAL SECURITY SOLUTIONS

Secure your business with reliable access control solutions from Valor Technologies.

The IT professionals at Valor Technologies know that security is crucial for the modern business. That's why our staff exhaustively works to put together comprehensive risk management strategies that serve today's business needs. Since many businesses are beginning to turn to technology to secure all aspects of their operations, Valor Technologies offers technology-based physical security solutions, as well as solutions that protect an organization's network and data.

The Valor Technologies professionals have taken the time and care to research and test some of the most useful security measures on the market to find which ones will present the most value for our clients. Whether you are looking to implement an access control system for a single door or a series of locations, our security professionals have just the solution your company needs.
