

MOBILE DEVICE MANAGEMENT

Your Business on the Move

Start widening the perimeters of business computing with Valor Technologies' Mobile Device Management system.

Your employees all carry around, and depend on, many types of devices. Smart phones, tablets, Ultrabooks, you name it, they have it. To capitalize on this shift in mobile computing, your company needs to enact a Bring Your Own Device policy that protects both your company and your staff. At Valor Technologies, we have the answer for this necessary integration: our mobile device management solution.

In the past, some larger companies have provided their staff with company-owned and managed mobile devices to boost productivity. While this plan is more viable than ever for small business, it doesn't make a whole lot of sense when you consider that each of these employees probably already has their own device, that they carry on them all the time anyway. Our solutions allow you to place a layer of security between your company's network and your staff's device and configure permissions accordingly.

UNIFIED COMMUNICATION SOLUTIONS FOR IMPROVED COLLABORATION

Improve interoffice communication with enterprise-level technology.

Communications can be a major pain point for small and medium-sized businesses. A fluid communications system promotes growth and allows for optimal operational efficiency. Unfortunately, many organizations also have trouble managing and maintaining all their communications solutions. This can stymie growth and make it difficult to reap the benefits of hard-earned progress.

SMBs that want to maximize the return on investment for their communications tools should take advantage of a customized Unified Communications Solution from Valor Technologies. Unified Communications is a collective term used to group together several communications solutions that allow for greater collaboration, cooperation, and efficiency on a company-wide scale. By taking advantage of services like Voice over Internet Protocol, hosted email, and video conferencing, among many others, you can fully leverage your technology and use it to build a better business model.
